DETR's RESEARCH AND ANALYSIS BUREAU
CHIEF ECONOMIST BILL ANDERSON

PRESS RELEASE

For Immediate Release
November 19, 2012

Nevada's Unemployment Rate Dropped to 11.5 Percent in October

Nevada's unemployment rate for October dropped to a seasonally adjusted 11.5 percent, down from 11.8 percent in September, the lowest it's been in three and a half years. The Las Vegas metro still holds the highest unemployment rate in the state, at 11.1 percent, not seasonally adjusted, down 0.4 point from September, said Chief Economist Bill Anderson for Nevada's Department of Employment, Training and Rehabilitation (DETR). In Reno/Sparks the rate fell 0.2 point over the month, to 10.6 percent. Carson City recorded a similar decline, from 10.9 percent to 10.7 percent. Las Vegas and both Northern Nevada metro all recorded their lowest October readings since 2008, he said. Through the first ten months of the year, the unemployment rate averaged 11.9 percent. This is down nearly two full percentage points from the same period in 2011 (13.7 percent).

"October's unemployment rate is the lowest rate since May of 2009, a significant step for our state," Governor Brian Sandoval said. "While this news is welcome, our state's unemployment rate remains at a high level and continues to indicate the need for sustained economic diversification and private sector job growth."

In October, a gain 2,500 new positions are typically expected relative to September, but preliminary estimates point to a gain of 4,700, Anderson said. Seasonally adjusted, this is an increase of 2,200. Private sector job levels stand 1,200 higher than the prior month and 3,200 above year-ago readings. So far this year, private sector payrolls are up 11,100 compared to the first ten months of 2011, based upon estimates from the monthly survey of businesses. Public sector payrolls have shown signs of leveling off in recent months, following an extended downturn.

"All things considered, available information suggests that Nevada's labor market has been on the mend since right around the beginning of 2011," Anderson said. "One of the broadest barometers of economic well-being, average weekly wages, has followed suit. After two years of outright declines during the recession, wages have been trending up ever since. Despite some weakness in this year's second quarter, through the first half of the year, wages are up 2.6 percent from the same six-month period in 2011. So far this year, wages have averaged \$830 per week."

More detailed information may be found in the attached Nevada Labor Market Overview and statistical data DETR's Research and Analysis Bureau. Data may be attributed to Chief Economist Bill Anderson.

NEVADA LABOR MARKET OVERVIEW October 2012

Nationwide, the unemployment rate remains stubbornly high (7.9 percent in October) and job growth, although positive, has been constrained (171,000 new jobs for the month). This less-than-desired improvement in the national labor market has been at the forefront of countless policy debates of late, especially in light of the fact that the U.S. economy “officially” emerged from recession in mid-2009. Arguably, however, the current suppressed response of the labor market to the overall economic recovery represents the continuation of a long-term structural trend. Over the past 40+ years, the U.S. economy, as measured by real GDP, has more than tripled. At the same time, the nation’s job base has yet to double.

Much the same is true in Nevada. Despite considerable improvement of late, State labor market conditions still have much ground to make up. On the jobs front, October typically brings with it a gain of 2,500 new positions relative to September. However, preliminary estimates point to a gain of 4,700. The end result is a seasonally adjusted increase of 2,200. The private sector continued to lead the way, as October job

	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Total Nonfarm Jobs	4,700	2,500	2,200
Private Sector	500	-700	1,200
Public Sector	4,200	3,200	1,000
Las Vegas	4,000	-500	4,500
Reno	1,600	700	900
Carson City	0	100	-100

Totals may not sum due to rounding

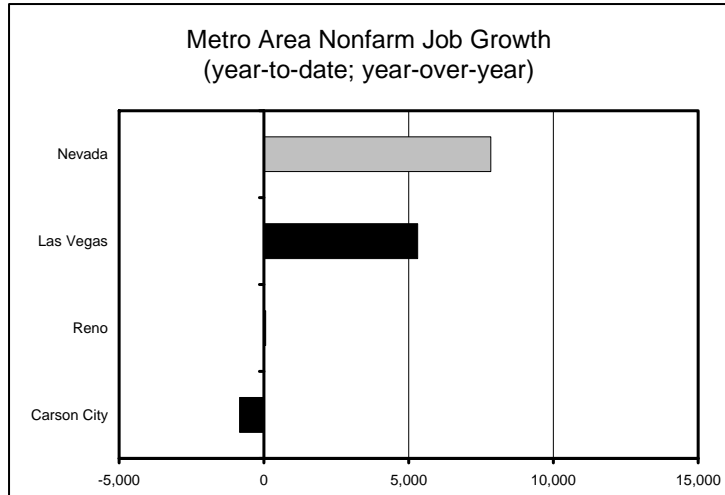

levels stand 1,200 higher than the prior month and 3,200 above year-ago readings. So far this year, private sector payrolls are up 11,100 compared to the first ten months of 2011, based upon estimates from the monthly survey of businesses. Public sector payrolls have shown signs of leveling off in recent months, following an extended downturn.

On a more sobering note, however, employment is still down 157,000 from the start of the recession in December 2007. In the decade prior to that, approximately 400,000 jobs were added in Nevada.

As we’ve noted in the past, the number of worksites in Nevada has trended up in recent quarters. An examination of trends by establishment size offers some interesting results. Establishments with the largest employment levels tended to be hit harder and quicker

during the early stages of the recession. The number of smaller employers in the State actually grew through 2008 before declining, but still remain above pre-recession levels. Over the 2006-2012 period, the State's largest establishments, with at least 500 employees, have declined by nearly one-fourth from 228 to 175. The number of smaller establishments, with less than 20 employees, has actually grown from 59,300 to 62,500.

Although results are quite volatile from month-to-month, within the State, Las Vegas appears to be leading the way in terms of job gains, with a seasonally adjusted September-October employment gain of 4,500. For the first ten months of the year, Southern Nevada employment gains have totaled 5,300 relative to the same period in 2011. The Las Vegas employment picture has been trending in a positive fashion since mid-2011.

Although monthly job growth in Reno has been positive in each of the past two months (+1,200 in September and +900 in October), gains over time have been much less pronounced than in the South. So far this year, job levels stand just 100 higher than a year ago. Carson City jobs have been on the decline since mid-2007 and are down by 800 so far this year.

Health/medical services (HMS) is a key part of the State's sector-driven approach to economic development. In October, healthcare/social assistance industry employment stands 1,900 higher than a year ago. In fact, job readings are considerably higher than pre-recession levels. Still, there appears to be considerable room for additional growth. For instance, the HMS "location quotient" (the share of employment in the sector relative to the same share nationwide) is just 0.65, suggesting that the share of HMS employment in

have been improving. So far this year, jobs stand 6,300 higher than in 2011.

Financial activities and manufacturing are trending sideways, at best. As has been the case throughout the early stages of recovery, construction is the main drag on the overall employment picture. So far this year, job levels are off by 3,700 compared to 2011.

Nevada is only about two-thirds of the national average.

Not surprisingly, within Nevada, healthcare-related employment is concentrated in the State's major population centers. Only Carson City has a higher share of HMS employment than in the nation as a whole, as represented by a location quotient in excess of 1.15. Eleven of the Nevada's 17 counties have location quotients of less than 0.5, suggesting that HMS' employment share is less than one-half of the national average.

Most private sector industries are adding to payrolls.

Trade/transportation/utilities employment is up 2,600 on a year-to-date basis. Professional/business services is up 1,700. Tourism barometers have been trending in a positive direction in recent months. For instance, hotel occupancy in Las Vegas has averaged about 84 percent over the past twelve months, up from a cyclical low of 80 percent in mid-2010. Partly as a result of these improving fundamentals, leisure/hospitality employment trends

As we've noted in the past, there are a number of signs pointing to a slight pick-up in the residential market. Through the first three quarters of the year, there have been approximately 7,000 new housing permits issued Statewide. At its cyclical low, over the 2009-2011 period, there was just an average of 5,000 permits issued during the same nine-month period. Despite the uptick in activity, permit levels are still only about one-fifth of pre-recessionary tallies.

Arguably, the best news in this month's Overview is on the unemployment front. The jobless rate stands at 11.5 percent in Nevada as of October, the second-consecutive monthly decline of 0.3 percentage point. This represents the lowest rate since May 2009. Perhaps most encouraging is that the decline in the rate occurred while the labor force increased. It is the result of an increase in resident employment (+5,900 over the month; not to be confused with the establishment-based job numbers reported above) coupled with a decline in unemployment (-4,900).

The U.S. Bureau of Labor Statistics offers some insight via its Alternative Measures of Labor Market Underutilization series. In essence, if discouraged workers were included in our estimate of the unemployed, the jobless rate would rise by, roughly, a percentage point. In the year ending with the third quarter, that would have translated into an unemployment rate of 12.9

Because of the volatile nature of this barometer, perhaps the best measure of underlying trends is to year-to-date developments. Through the first ten months of the year, the unemployment rate averaged 11.9 percent. This is down nearly two full percentage points from the same period in 2011 (13.7 percent).

percent, compared to an official rate of 12.2 percent. Under the broadest alternative measure of joblessness, which would include all of those who are only marginally attached to the labor force, including discouraged workers, plus (most importantly) those working part-time for economic reasons, the jobless rate would have been slightly above 21 percent over the 12-month period.

We are often asked questions along the lines of: “While you report the ‘official’ unemployment rate, what is the ‘real’ rate?” (It is important to note that the official concept of unemployment includes all jobless persons who are available to take a job and have actively sought work in the past four weeks. This concept has been thoroughly reviewed and validated since 1940.) Oftentimes, such inquiries concern what the jobless rate would be if those individuals whom have given up their search for work, and dropped out of the labor force because they felt that no job opportunities exist for them (discouraged workers), were included in the official definition of the unemployed.

While not directly comparable to the State information reported above, non-seasonally adjusted unemployment rates fell slightly in 12 of 17 Nevada counties over the September-October period, and held steady in two others¹. Perhaps most importantly, all but one county registered a year-over-year decline in the jobless rate. Declines ranged from -0.2 percent to -3.2 percent.

¹ Unemployment rates for the State’s metropolitan areas and counties reported here are not adjusted for seasonality. Hence, comparisons to the State’s seasonally adjusted rate should be avoided. Legitimate comparisons, however, can be made to the State’s unadjusted rate – 10.9 percent in October, down from 11.2 percent in September and 13.2 percent in October 2011.

The Las Vegas metro area remains home to the highest unemployment rate in the State, at 11.1 percent, not seasonally adjusted, down 0.4 point from September. This is the lowest October reading since 2008. In Reno/Sparks the rate fell 0.2 point over the month, to 10.6 percent. Carson City recorded a similar decline, from 10.9 percent to 10.7 percent. Both Northern Nevada

metro areas also recorded their lowest October readings since 2008.

All things considered, available information suggests that Nevada's labor market has been on the mend since right around the beginning of 2011. One of the broadest barometers of economic well-being, average weekly wages, has followed suit. After two years of outright declines

during the recession, wages have been trending up ever since. Despite some weakness in this year's second quarter, through the first half of the year, wages are up 2.6 percent from the same six-month period in 2011. So far this year, wages have averaged \$830 per week.
