## **PRESS RELEASE**

For Immediate Release  
April 19, 2013

### **Nevada's Unemployment Rate Slightly Increases in March to 9.7 Percent**

In March, the seasonally adjusted unemployment rate in Nevada rose to 9.7 percent, up from 9.6 percent in February. The rise in the unemployment rate ended 20 months of the rate either declining or holding steady, said Bill Anderson, chief economist for Nevada's Department of Employment, Training and Rehabilitation (DETR). As for the state's three metro areas, Las Vegas' rate remained at 9.8 percent, down from 11.7 percent a year ago. The Reno/Sparks area unemployment rate slightly decreased from 10.1 percent in February to 10 percent in March. Carson City's rate dropped slightly from 10.7 percent in February, to 10.6 percent, but continues to have the highest rate of all the metro areas. However, it is down considerably from 12.2 percent a year ago.

"Nevada's economy has been improving, and overall, I'm pleased with the general direction of the State's labor market," Governor Brian Sandoval said. "So far this year unemployment is down roughly two percent, and preliminary estimates show that we have created 25,000 more jobs to date than we had at this point last year. However, the slight uptick in the jobless rate in March underscores that our recovery remains fragile and we must continue our efforts to strengthen and diversify our State's economy."

Over the year, the unemployment rate has dropped from 11.6 percent in March of 2012, and unemployment is down by 28,000 to 132,900 this month. The slight increase in the unemployment rate for March is attributable to changes in the employment picture, Anderson said.

Total nonagricultural employment in Nevada declined by an estimated 2,900 jobs (seasonally adjusted) in March, which follows a revised loss of 4,100 jobs in February. Typically, March non-farm job levels expand by about 7,300 relative to the prior month. This year, however, just 4,400 jobs were added, resulting in the seasonally adjusted decline.

"So far this year, job growth appears to be slowing a bit after exceeding expectations in the second half of 2012," Anderson said. "Still, year-over-year comparisons show Nevada growing at a 2.3 percent rate, or 25,500 jobs, relative to the first three months of last year. Despite the decline in non-farm payroll jobs and a slight increase in the unemployment rate, nearly all over-the-year comparisons are evidence of an ongoing mild recovery in Nevada's labor market."

## NEVADA LABOR MARKET OVERVIEW March 2013

Available evidence suggests that Nevada's labor market began its long climb out of the recession's impacts right around the beginning of 2011. While March's results suggest some sideways movement, now is a good time to take stock of Nevada's relative showing of late, whether measured over time or against other states.

Barometers of underlying trends in unemployment insurance activity are encouraging. Initial claims have fallen in 37 of the past 40 months. More specifically, 15,400 claims were filed in March, the second-lowest level in the past five years. March's results are actually 7.6 percent below the monthly average over the past ten years. Similarly, other measures of unemployment activity (exhaustions, weeks paid, continued claims, and first payments) also remain lower than their recent historical averages.

Since job growth turned positive and strengthened since 2011, Nevada has gradually made up some of the ground lost during the recession. Prior to the downturn, Nevada had the most pronounced employment growth in the

nation. At the height of the recession, the Silver State had the most pronounced job losses. In 2011, however, Nevada's private sector job base grew faster than 13 other states. Through the first three quarters of 2012, growth was stronger than in 21 other states. (This is based off Quarterly Census of Employment and Wages information, and represents a "complete count" of Nevada jobs covered by unemployment insurance. It is not as timely as the monthly estimates from the Current Employment Statistics Program that will be discussed below.) In fact, in September of last year, private sector job growth was stronger than in 33 other states, relative to September 2011, suggesting that our relative performance strengthened

as the year unfolded.

More so than any other indicator, considerable attention is typically paid to the unemployment rate. Recent declines in Nevada's unemployment rate have been the strongest in the nation, by a considerable margin. Specifically, original estimates suggest that February's year-over-year decline in the jobless rate came in at 2.2 percentage points. The next most-pronounced decline was 1.3 points, recorded by three other states: Florida, Idaho, and Rhode Island.

In March, the seasonally adjusted unemployment rate in Nevada rose

to 9.7 percent, up from 9.6 percent in February. The uptick in the unemployment rate ended 20 months of the rate either declining or holding steady. Over the year, the unemployment rate has dropped from 11.6 percent in March of 2012, and unemployment is down by 28,000 to 132,900 this month.

All told, 13 of the State's 17 counties registered year-over-year

unemployment rate declines in March. Three counties saw no change in the rate, while another saw the jobless rate barely tick up. As has been the case for the past several years, the lowest unemployment rates continue to be found in rural Nevada, especially in those regions where mining has a heavy presence. Through the first three months of the year, the lowest rates are in Esmeralda, Lander, Humboldt, Elko, and Eureka. The highest are in Lyon and Mineral.

As for the State's three major metro areas, Las Vegas is home to a single-digit (9.8 percent) jobless rate for the second consecutive month in March. This translates into a 1.9 percentage point decline relative to a year ago. In the Reno/Sparks region, March's ten percent rate represents a 1.8 point decline from a year ago. Carson City remains home to the highest metro area jobless rate, at 10.6 percent, but it is still down noticeably from a year ago, when it measured 12.2 percent.<sup>1</sup>

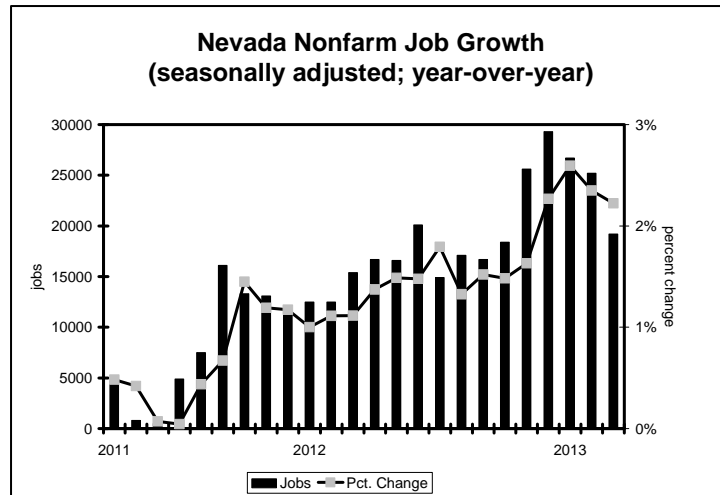

Monthly job changes worked against the unemployment rate this month. Total nonagricultural employment in Nevada declined by an estimated 2,900 jobs in March, seasonally

<sup>1</sup> Unemployment rates for the State's metropolitan areas and counties reported here are not adjusted for seasonality. Hence, comparisons to the State's seasonally adjusted rate should be avoided. Legitimate comparisons, however, can be made to the State's unadjusted rate – 9.8 percent in March, unchanged from February and down from 11.6 percent in March 2012.

adjusted. This comes on the heels of a revised loss of 4,100 jobs in February. Typically, March non-farm job levels expand by about 7,300 relative to the prior month. This year, however, just 4,400 jobs were added, resulting in the seasonally adjusted decline noted above.

So far this year, job growth appears to be slowing a bit after exceeding expectations in the second half of 2012. Still, year-over-year comparisons show Nevada growing at a 2.3 percent rate, or 25,500 jobs, relative to the first three months of last year. Nationally jobs grew by 1.6 percent in the first quarter compared to a year ago. More specifically, initial estimates for February found that just ten states had a faster annualized job growth rate than Nevada.

Goods producing industries are showing decent year-over-year growth rates, adding 5.2 percent more jobs in the first quarter compared to the same period in 2012, a gain of 5,300. Yet, like other barometers, growth appears to be showing some signs of slowing. A

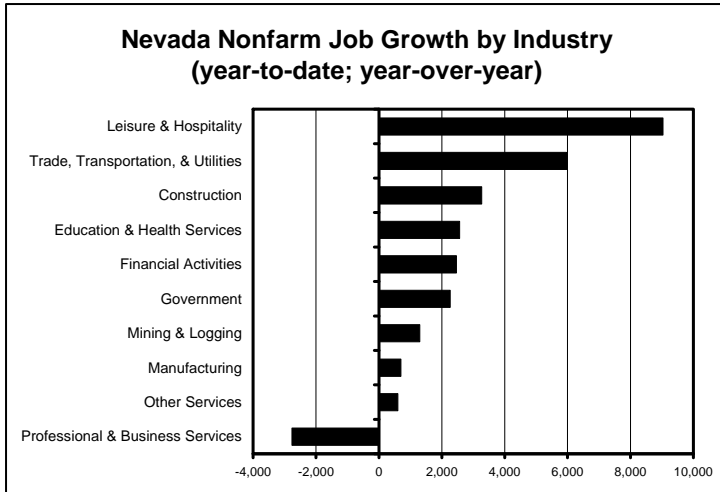

loss of 1,200 jobs was posted in March after a small increase (+200) in February. Construction employment contracted by 1,000 jobs, mining lost 200 jobs, and manufacturing employment did not change from February to March, following seasonal adjustment.

Nevada's top three growth industries on a year-over-year basis are mining/logging (+8.9 percent through the first quarter of the year), construction (+6.8 percent), and financial activities (+4.7 percent). Each exceeds their respective national growth rates, which are 2.5 percent, 2.7 percent, and 1.3 percent, respectively. It is reassuring to see that two of the hardest hit industries during the recession, construction and financial activities, are rebounding.

In fact, one sub-sector of financial activities, real estate/rental/leasing, recorded a year-over-year growth rate in March of 8.4 percent. As a result, it overtook a sector in Nevada that was growing steadily throughout the recession

	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Total Nonfarm Jobs	4,400	7,300	-2,900
Private Sector	3,100	6,600	-3,500
Public Sector	1,300	700	600
Las Vegas	4,300	4,800	-500
Reno	-300	800	-1,100
Carson City	200	100	100

and into the early stages of recovery, mining, which had a year-over-year change of 6.6 percent in March.

The real estate/rental/leasing segment, with a relatively diverse workforce across gender lines, was hit hard by the downturn. It is an industry in which the ratio of women workers (46 percent) is about equivalent to the share of women in the total workforce (48 percent). Nevada's economic development efforts have identified key markets in which Nevada is poised for growth. Within this sector-driven approach, only one sector has a female-to-male ratio greater than one – health and medical care, where 75 percent of the workforce is made up of women. On the other end of the spectrum, only 14 percent of all jobs in the mining sector are held by women. Clean energy (22 percent) and manufacturing (25 percent) also rank low on the scale with respect to female workers. The tourism/gaming/entertainment sector is in line with the Statewide ratio.

Sales prices of homes in Nevada increased by 20 percent in the fourth

quarter of 2012 compared to 2011 values, according to the Federal Housing Finance Administration (FHFA). Most housing related data are pointing to a recovery, but some in the industry are skeptical, arguing that there may be “artificial” supply constraints, thereby driving up prices, making it difficult to delineate the difference between a market driven increase and policy-driven

impacts.

Looking across the country, though, prices are increasing in most states. U.S. home prices rose 5.5 percent from the fourth quarter of 2011 to the fourth quarter of 2012. In the fourth quarter of 2012, the FHFA State Home Price Index ranked Nevada as number two in the yearly change of the price index. For reference, Arizona was ranked number one, beating out Nevada with an increase of 22 percent. Furthermore, recent data by local realtor associations indicate that the spring buying season is fueling demand and prices are continuing to ascend.

The only industry that is not growing is professional/business services, which has 2,800 fewer jobs in the first quarter compared to the same period a year ago. Losses were recorded in two out of three sub-sectors: the prof./scientific/tech. services industry (-1,100); and admin. & support/waste mgmt. & remediation services (-1,800).

Employment levels in Carson City have been hovering at cyclically low readings for about 18 months, with an estimated 27,700 jobs in the area in March. This post-recession level of employment was first recorded in the area in October of 2011 and has bounced no higher than 28,000 jobs through March 2013. Of the ten major industries in Carson City, all have had negligible change in employment levels.

Reno/Sparks seasonally adjusted employment contracted by 1,100 jobs (-0.6 percent) over-the-month. Based upon historical trends, job levels should have increased by about 800 (not seasonally adjusted), but actually declined by about 300, resulting in the seasonally adjusted loss. On a year-over-year basis, the Reno/Sparks area's private sector is growing at a one percent rate, or 1,600 new jobs, since the first quarter of 2012. Construction employment grew by 7.2 percent and food services and drinking places grew by 3.5 percent, adding 600 and 400 new jobs, respectively, over-the-year during the first quarter of 2013.

Las Vegas job levels slid by 500 (-0.1 percent) over-the-month. On a year-over-year basis, the private sector in Las Vegas is up 2.1 percent, or 14,900 jobs through the first three months of 2013. Of the ten super-sectors in the Vegas economy, all are up except education/health services, which fell by 200 jobs over-the-year. Like the

Statewide trend, the goods producing sector is up, gaining a healthy four percent (+2,200 jobs), led by gains in construction.

Nevada's economic improvement is also evident in long-term unemployment trends. Over the course of the downturn, the number of people out of work for an extended period of time rose to record highs in Nevada. (The Bureau of Labor Statistics defines long-term unemployment as those out of work for 27 weeks or more.) In 2011, the number of jobless Nevadans falling into this category averaged approximately 90,000 per month, about 52 percent of all of those without a job. At its peak, the level of long-term unemployment was more than ten times greater than in 2007.

With consistent year-over-year improvements, the long-term unemployed cohort has begun descending at a faster rate. Specifically, during the 12 months ending in March, 67,000 out of 148,500 jobless Nevadans are long-term unemployed (a share of about

45 percent). For comparison, the 2006 and 2007 readings had averages of just 12 percent and 13 percent, respectively.

To further understand the unemployment picture, national unemployment rates in the private sector versus the government sector are explored this month. Government workers historically have had very low unemployment rates compared to other industries. Furthermore, during the recent recession, the private sector jobless rate peaked prior to that for the public sector. Since reaching those peaks, the public/private gap has narrowed. At the height of the recession, the private sector unemployment rate exceeded that for government workers by more than seven percentage points.

Currently, the gap is about four points.

Despite the decline in non-farm payroll jobs and a slight uptick in the unemployment rate, nearly all over-the-year comparisons are evidence of an ongoing mild recovery in Nevada's labor market. Additionally, one of the broadest measures of overall economic activity is also pointing to noticeable improvement. Following a recession-induced decline in 2009, personal income has increased in every year since. Specifically, 2012 brought with it a 2.4 percent income gain. In each of the past two years, national gains have exceeded Nevada's increases by about one percentage point. Prior to the recession, Nevada's growth was considerably stronger than in the nation as a whole.
